CAREER OBJECTIVE

Aspiring Software Development Engineer with strong foundations in Data Structures, Algorithms, and backend development. Skilled in building full-stack applications and solving real-world problems. Seeking SDE opportunities to contribute to scalable and impactful software solutions.

EDUCATION

Vellore Institute of Technology <i>B.Tech in Computer Science & Engineering</i>	Vellore, Tamil Nadu CGPA: 9.30 / 10
Sri Shirdi Sai Junior College <i>Higher Secondary (Class XII)</i>	Rajahmundry, Andhra Pradesh 86.4%
Sri Shirdi Sai Vidyanikethan <i>Secondary (Class X)</i>	Rajahmundry, Andhra Pradesh 98.6%

TECHNICAL SKILLS

Programming: C, C++, Java, SQL, JavaScript
Core CS: Data Structures and Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, System Design Fundamentals
Web Development: HTML, CSS, JavaScript, React.js, Node.js, Express.js, EJS
Databases: MySQL, MongoDB, MongoDB Atlas
Tools: Git, GitHub, VS Code, Postman

PROJECTS

AI-Powered Banking Backend System

Scalable Backend Architecture with AI Integration

- Developed a production-style banking backend using Node.js, Express.js, and MongoDB with modular MVC architecture and REST APIs.
- Implemented JWT authentication, transaction management, ledger-based balance tracking, and secure debit/credit operations.
- Integrated Gemini API for AI-driven spending analysis and personalized financial insights.

RomeNest – Vacation Rental Platform

Full-Stack Web Application with AI Integration

- Developed a full-stack vacation rental platform using Node.js, Express.js, MongoDB, and EJS following MVC architecture.
- Implemented authentication, authorization, image uploads using Cloudinary, and interactive location visualization using Leaflet.
- Integrated Gemini API for AI-based review summarization and deployed the application using Render and MongoDB Atlas.

Cash Flow Minimizer System (C++ Implementation)

Graph Algorithms and Optimization

- Developed a cash flow minimization system using C++ to optimize settlements among multiple users by reducing redundant transactions.
- Applied graph algorithms and greedy techniques to minimize the number of transactions and improve payment settlement efficiency.
- Utilized STL data structures to efficiently handle complex expense settlements and optimize cash flow.
